## Abstract

Many countries introduced the requirement to wear masks in public spaces for containing SARS-CoV-2 making it commonplace in 2020. Up until now, there has been no comprehensive investigation as to the adverse health effects masks can cause. The aim was to find, test, evaluate and compile scientifically proven related side effects of wearing

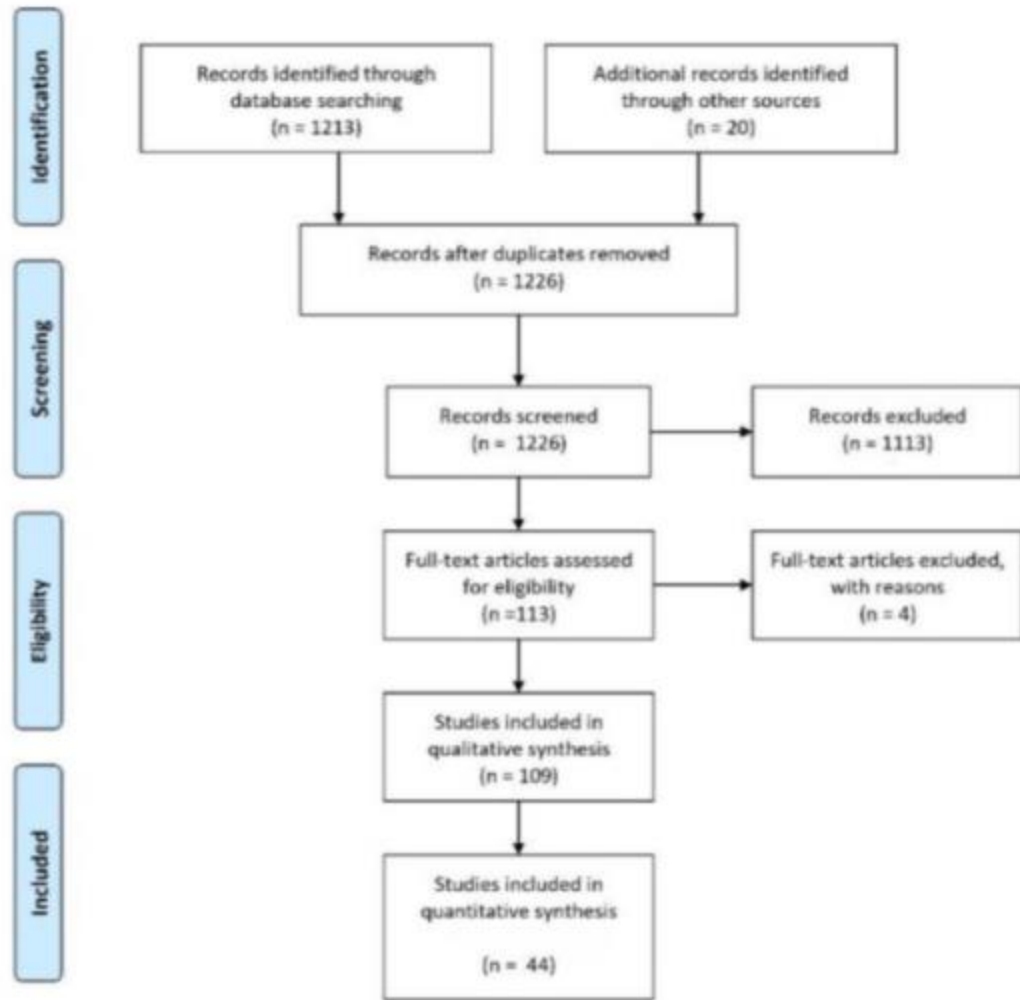

masks. For a quantitative evaluation, 44 mostly experimental studies were referenced, and for a substantive evaluation, 65 publications were found. The literature revealed relevant adverse effects of masks in numerous disciplines. In this paper, we refer to the psychological and physical deterioration as well as multiple symptoms described because of their consistent, recurrent and uniform presentation from different disciplines as a Mask-Induced Exhaustion Syndrome (MIES). We objectified evaluation evidenced changes in respiratory physiology of mask wearers with significant correlation of O<sub>2</sub> drop and fatigue ( $p < 0.05$ ), a clustered co-occurrence of respiratory impairment and O<sub>2</sub> drop (67%), N95 mask and CO<sub>2</sub> rise (82%), N95 mask and O<sub>2</sub> drop (72%), N95 mask and headache (60%), respiratory impairment and temperature rise (88%), but also temperature rise and moisture (100%) under the masks. Extended mask-wearing by the general population could lead to relevant effects and consequences in many medical fields.

**Keywords:** MIES syndrome; N95 face mask; adverse effects; contraindications; dyspnea; headache; health risk assessment; hypercapnia; hypoxia; long-term adverse effects; masks; personal protective equipment; physical exertion; risk; surgical mask.

**Figure 2** Overview including all 44 considered studies with quantified, significant adverse effects of masks (black dots and black rectangles). Not all studies examined each mentioned parameter, as focused or subject-related questions were often in the foreground. Gray fields correspond to a lack of coverage in the primary studies, white fields represent measured effects.

**Figure 4** Unfavorable mask effects as components of Mask-Induced Exhaustion Syndrome (MIES). The chemical, physical and biological effects, as well as the organ system consequences mentioned, are all documented with statistically significant results in the scientific literature found (Figure 2). The term drowsiness is used here to summarize any qualitative neurological deficits described in the examined scientific literature.

**Increased risk of adverse effects when using masks:**

**Internal diseases**

COPD  
Sleep Apnea Syndrome  
advanced renal Failure  
Obesity  
Cardiopulmonary Dysfunction  
Asthma

**Psychiatric illness**

Claustrophobia  
Panic Disorder  
Personality Disorders  
Dementia  
Schizophrenia  
helpless Patients  
fixed and sedated Patients

**Neurological Diseases**

Migraines and Headache Sufferers  
Patients with intracranial Masses  
Epilepsy

**Pediatric Diseases**

Asthma  
Respiratory diseases  
Cardiopulmonary Diseases  
Neuromuscular Diseases  
Epilepsy

**ENT Diseases**

Vocal Cord Disorders  
Rhinitis and obstructive Diseases

**Occupational Health Restrictions**

moderate / heavy physical Work

**Dermatological Diseases**

Acne  
Atopic

**Gynecological restrictions**

Pregnant Women
